## SAFEMASTER W

### Radio controlled safety system UH 6900 - In pair mode

**DOLD** 

The safety approved, bidirectional **radio controlled safety system UH 6900** from the **SAFEMASTER W series**, is for the transmission of safety inputs such as E-stop and conventional control functions and offers great flexibility for the protection of hazardous areas. By implementing the latest radio controlled technologies, a high level of safety and a long transmission range is achieved. Two safety zones can easily be connected wirelessly over a considerable distance. The main application areas include applications covering large areas and mobile applications such as fully automated conveyor systems and driverless transport systems. Simple and inexpensive retrofitting of existing safety systems can also be achieved wirelessly with this system.

The device allows connection of up to 3 two-channel safety transmitters (E-stop, LC, safety gate, two-hand, etc.), simple configuration, and comprehensive sampling and diagnostic options.

With the radio controlled safety system, you will have an automated safety solution that can be integrated wirelessly into various applications. The option to select between three operating modes (complete protected mode, cross mode, protected mode with connectable ratio control) allows the device to be quickly and reliably adapted to your individual application.

#### Advantages and customer benefit

- ▶ For safety applications up to Cat. 4 / PL e or SIL 3, TÜV certified
- ▶ Safety approved, bidirectional E-stop transmission
- ▶ Long transmission range up to 800 m
- ▶ Quick start, fast set-up procedure
- ▶ Reliable data transmission with superior interference suppression
- ▶ Comprehensive error indication and diagnostics
- ▶ Two channel safety inputs / outputs
- ▶ Control inputs / outputs
- ▶ Integrated analysis of existing on site radio networks

**Our experience. Your safety.**
